PONZI TIRE

ECOLOGICAL TECHNICAL DOORMAT

Ponzi Tire is a technical doormat composed of striped elements of rubber compound and aluminium profiles, with high cleaning power and wet absorption. It is made with an innovative technique that follows a principle of respect for the environment and recycling of materials to offer a new product in the world of technical doormats. It is designed to be trampled by an intense flow of traffic people, by a continuous passage of trolleys, luggage, stretchers with small thick wheels, even with a high load. It is mainly used inside the buildings and can be supplied closed or open with the standard version with a slightly drain for any possible drainage of water accumulation. The rubber compound, used with special fibres inside, is particularly suitable for the wet absorption of shoes soles. It is simple to be cleaned because dirt and dust can be removed with a vacuum cleaner. Another feature that makes it interesting is its reversibility (two reversible surfaces) with double duration is compared to other types of traditional mats (coco. etc.) increasing durability and quality of entrance.

PONZI NEW CABLE

ANTI-TORSION

PONZI NEW CABLE is a doormat primarily for indoor use, composed of elements strips, in aluminium profiles and different types of textile fabric inserts in anthracite grey, beige, brown, and burgundy red colors. The aluminium profiles are separated by mm 4 PVC connecting elements containing a steel cable, with an anti-noise and anti-vibration lower rubber band. It is available in two different thickness of mm 17 or mm 22 to allow an easier recessed mounting in different types of floor. The moquette mat can be alternated with the plastic brushes insert for an easy removal of dirt. The advantage of Ponzi Cable doormat is its flexibility and robustness and it is recommended primarily for pedestrian traffic, with the possibility of a smooth passage for trolleys. It is easy to install, eliminating the problem of dirt accumulation of usual doormats. Worn elements can be replaced easily for a long life of the products and for its maintenance. It can be used either in external, with scraper aluminium profile inserts.

PONZI SCRUB

HEAVY TRAFFIC

PONZI SCRUB is a mat that can be used in any shape or size. It is reversible, robust and easy to maintain. Ponzi Scrub combines the strength, reversibility and easy of maintenance with design and style. A powerful combination of 100% high-density of extruded PVC on profiles and aluminium bars, gives the system its distinctive look. Alternating grids of PVC and aluminium bars, it removes dirt and relative deposits it under the walkable floor for an easier cleaning. It is particularly recommended for use in outer areas and outdoor and where there is possibility of direct rain and wind. Ponzi Scrub is designed for heavy traffic, it is suitable for the use of trolleys, such as supermarkets, hospitals and shopping centres and it is also suitable for the passage of wheelchairs. Additional clips as options for heavy traffic ensure that Scrub is secured to the floor. A huge range of accessories for recessed or flush mounting, T-bar, mat-frame, profiles-ramp are available to fill any site or special request of any building entrance.

The Ponzi Scrub technical mat is made with high quality aluminum bars, alternated with open PVC rubber elements, for easy drainage. The profiles are connected by an interlocking snap system that connects them along the entire length of the doormat, for greater stability. Additional optional clips are available for heavy-duty applications, such as installations in places with heavy traffic. This system means that they can be rolled up. Fire classification: Class 1

PONZI WAY

HEAVY FOOT IN EXTERNAL AREAS

Composed of separate elements in extruded aluminium profiles or PVC bars (black, grey, burgundy-red, brown, green, blue, gold, bronze) and a range of PVC-plate horizontal to the walking direction, joined by wires steel, ideal for removing any residual water or something else, Ponzi Way is recommended in conjunction with Ponzi Tire. Considering the robustness of this doormat, its ideal use is for modern retail, shopping centres, supermarkets, shops, offices, hospitals and every environment with high traffic flow of people, trolleys, stretchers, wheelchairs for disable people, because its rigidity facilitates the passage of the wheels without causing their stopping. Being reversible it is doubly durable. The upper part, worn by the continuous passage of trolleys, stretchers or luggage can be turned upside down, when it get damaged. It is recommended to be used recessed in the floor; if this is not possible we can also supply a perimeter ramp frame to avoid tripping and to facilitate the access to the building.

The Ponzi Way technical doormat is mainly used in outdoor areas for its high cleaning power. The rubber inserts are black and shaped with small grooves for more effective cleaning. The connecting element is made with aluminum profiles with small drainage channels for the water. The durability of the materials that compose it and its "double-face" feature, make it long-lasting.

PONZI EASY JOINT

SUITABLE FOR INTERIORS

The Ponzi Easy Joint technical doormat is made up of large aluminum profiles each containing two fabric inserts that fit together to form the cleaning surface. An underlying adhesive strip has a sound-absorbing and anti-slip effect. It is available in 12 or 17 mm versions with a 15 or 20 mm containment frame to be fixed, to level it to the floor. The Ponzi Easy Joint system is easy to install and offers quick and effective solutions to incoming moisture and dirt. Two installation methods are possible: the Brick-bond, for maximum use of the material, thanks to an inverted T profile, or it can be installed directly on the floor. Different colors of needle felt textile inserts. The Dry insert gives greater performance and drying effect, while the Scrub insert has scraping fibers suitable for removing coarse dirt. This doormat is suitable for low and medium traffic indoors.
